

## **Introduction**

Welcome to Netflix! Or at least our version of Netflix, a place where you can experience movies without actually watching them! As a customer, our program will allow you to view movies that are available to you and then order up to twenty of them into your own personal wish list. Lets get started.

## **Main Menu**

When you begin the program, you will be greeted with a Welcome to Netflix banner and then given three options; Admins is for administrators who have access to edit the entire database of movies, New Customers is where customers are able to create a profile and then begin editing their wish lists and Returning Customers is for people who already have a profile and want to get right back to work on their movie preferences. See below for the section most appropriate for you.

## **Admins**

After selecting the admin option (1), you will be asked to input the admin password. If it is incorrect you will be prompted again, if it is correct you will be brought to the admin main menu. Here you will find four different options; adding a movie, viewing least rated movie, viewing all the movies, or exiting the program. All the work that you do effects the entire movie database- so delete carefully!

If you select *Add a movie to the database* (1) then you will brought to the Movie Input Module, and prompted to enter the following items. The module will walk you through inputting title, release date and rating of each movie. If you successfully add a movie you will be told the total number of movies in the database, and then given the admin main menu again.

The *View least rated movie in the database* (2) is so that you can view what people really aren't enjoying. Once you see what the movie is, you will be asked if you want to delete the movie from the database (yes or no). This is the only way that you are able to delete movies from the database.

The last option for admin is to *View all movies in the database* (3). This option will print out the movies available in order of release date and then bring you back to the main menu.

## **New Customers**

Welcome new customers! In the main menu you have selected option 2, and are now in the Customer Adding Portal. You will be prompted to enter your name. Then you will have to create a password, make sure it is something you will remember! Other basic information will be needed as well, including your email and credit card number. The last four digits of you credit card will become your login along with the password you have created. After you have successfully created a new profile you are officially a customer! To continue, see below.

### **Customers (returning)**

As a returning customer, your login is the last four digits of your credit card number, and then your password. After both of those are correct you will have access to several exciting options!

Seemingly the most important is the ability to 'play' the first movie in your wish list (1). Once you access this movie you will be asked if you want to add the movie to your *recently watched list* (5), and delete it from your wish list permanently. Keep in mind that you can only have twenty movies max in your list.

But before you can 'play' movies you will need to *Add a new movie to your wish list* (3). This option will simply ask you for the movie ID number and then ask you where you want it to be added within your wish list; front, back, or somewhere specific in the middle.

*Delete a movie from your wish list* (4) works the same way, you simply put in the ID number of the movie you want to delete.

If you don't know the ID number of a specific movie, we suggest *View all available movies* (6), which will print out all the movies in order of release date, but will display their titles and their ID numbers as well.

Other exciting options we have created for you include the ability to *See movies in your wish list* (2) which prints the movies in your wish list in the order that you have inserted them.

We hope that you enjoy using our program for all of your movie needs!
